LOWER (or) UPPER BODY CIRCUITS

These classes will enable you to build a lean, defined stronger lower or upper body using free weights and your own bodyweight. We achieve this by doing exercises such as squats, lunges, RDL's, kickbacks for lower and presses, pulls, arms and shoulders for upper!

BOX-FIT

Box-fit is a high-intensity exercise class that combines resistance training with aerobic exercise. This class is non-contact; the emphasis is on knocking your body into shape, not knocking anyone out. You will be taught core boxing techniques to punch your body to the next level while strengthening your core and pushing your cardiac output to its maximal limit.

CIRCUITS

Circuits is a form of body conditioning using resistance training and high-intensity aerobics. It targets strength building and muscular endurance. An exercise "circuit" is one completion of all prescribed exercises in the program.

STRENGTH AND CONDITIONING

Strength and conditioning is a high-intensity exercise class that combines resistance training with aerobic exercise. You will perform both strength lifts alongside endurance and cardio based movements for an overall cross-training outcome.

PILATES FUSION

This is the class that concentrates on strengthening the body with an emphasis on the shoulders and core. Concentrating on balance, posture and flexibility, this class improves general fitness and overall well-being.

STEP

Step is a fun way of getting your cardio workout done. It's a dance-type class where you step on and off a step (of different heights, depending on our level). Watch your fitness/coordination improve and your energy levels rise!

PUSH & LIFT

Push and Lift will sculpt, tone and strengthen your entire body! Push and Lift is one of the fastest ways to get in shape as it challenges all of your major muscle groups while you squat, press, lift and curl. So with your choice of weight and highly-trained instructors you can get the group effect and the results you've been looking for!

SPIN

This is the ultimate indoor cycling experience which has an equal amount of sprints and uphill climbs but its all systems go with quick bursts and short recoveries. It triggers a high metabolic response and allows for your body to burn extra calories after the class and throughout the day.

STRETCH AND FLOW/YOGA

Here we help stretch out those tired, tight muscles while also strengthening the body. We slow down our breathing while we move, creating a flow.

BELLY-DANCING

A class that will improve your core, and overall strength, flexibility, balance and posture. It's also a belly-load of fun!
